HOW TO IDENTIFY A BRAKE DRUM

1. Measure the inside diameter of the drum (figure 1)

2. Count the number of holes

3. Measure the overall depth (figure 2)

4. Measure the pilot (figure 3)

5. Measure the brake surface (figure 4)

This can be done by measuring the width of the brake shoe; however, it's important to note that the brake surface will be slightly larger than the brake shoe. Or measure as shown in figure 4.

6. Measure the diameter of the mounting hole
